

Oncology Nursing Society Member Celebrated for Lifetime of Research Contributions

Oncology Nursing Society (ONS) member Barbara Given, RN, PhD, FAAN, a University Distinguished Professor in the College of Nursing at Michigan

State University (MSU) in East Lansing, has been selected as the first researcher honored in a new feature in the journal *Cancer Nursing*. The feature, called "Living Legacy," offered Given a chance to reflect on her career by highlighting benchmarks and passing along key messages to junior researchers. *Cancer Nursing* plans on highlighting researchers who have made significant impacts to the field.

"It is humbling to be honored," Given said. "A career such as mine does not happen without lots of important colleagues and students, team members, administrative support, and for me, a supportive husband and fellow researcher, Bill."

Throughout her career, Given has focused on areas such as long-term cancer care, family home care, and cancer intervention. Other topics of interest include chronic illness, gerontology, symptom management, and health services research.

Pam Hinds, PhD, RN, FAAN, editor-in-chief of *Cancer Nursing*, said the point of the new feature is to offer something in the journal beyond the traditional method of research reporting.

"We wanted to talk about the paths taken and decisions made by the researchers themselves," Hinds said. "Dr. Given has been one of the most consistently well-funded investigators in nursing, and she is well recognized for creating interventions in a clinically relevant way. In addition to her basic research findings, there always is a practical outcome that directly benefits patients."

Given received her bachelor's and master's degrees in nursing from Ohio State University before coming to MSU in 1966. She received her doctoral degree from MSU in 1976 and began as a

professor and director of the graduate program in 1980. She was promoted to senior research scientist in 2000, was honored as a University Distinguished Professor in 2001, and was appointed as associate dean for research in 2007. During her distinguished career, Given has successfully obtained funding from the National Institutes of Health for more than 30 years.

"I am proud of our contributions to nursing science in the area of symptom management and that we kept the importance of family caregiving as a major priority among funding and policy groups so that it is a research agenda at the national level," Given said. "But just as important, we are very proud of the students and junior faculty who worked with us over the years and now are successful scientists in their own right."

MSU has been advancing knowledge and transforming lives through innovative teaching, research, and outreach for more than 150 years. MSU is known internationally as a major public university with global reach and extraordinary impact. Its 17 degree-granting colleges attract scholars worldwide who are interested in combining education with practical problem solving.

ONS Member Honored for Exemplary Nursing Care

St. Joseph's/Candler (SJC) honored ONS member Krista Aliffi, RN, BDN, CAPA, the breast cancer navigator at the Nancy N. and J.C. Lewis

Cancer and Research Pavilion in Savannah, GA, with the 18th Annual McAuley Award. The award is presented annually to the SJC staff member who best exemplifies the mission and values of the health system. The award is named in honor of Catherine McAuley, who founded the Sisters of Mercy in the hopes of bringing education, health care, social justice, and spiritual guidance to those in need. Nominations are based on an individual's ability to illuminate the health system's values of compassion, quality,

integrity, courtesy, accountability, and teamwork.

As an RN and oncology patient navigator, Aliffi's primary job is to guide breast cancer survivors from diagnosis through the end of treatment. This includes coordinating appointments, answering questions, and being a compassionate source of assistance. Nurse navigators are the future of cancer treatment and a key part of the Lewis Cancer Pavilion's participation in the National Cancer Institute's Community Cancer Centers Program.

Aliffi's patients said they might not have completed their cancer treatment without her. She keeps toys in her office for children of patients getting treatments, and she will help a patient any time on any day of the week.

One of the coworkers who nominated her said, "I have heard more times than I can count; patients tell me they honestly did not know what they would have done or how they would have made it through their illness without Krista."

Other nominators said, "She is compassionate with patients and their caregivers and most responsive to their pain, suffering, anxiety and depression."

"Krista takes calls at all hours of the day . . . seven days a week from patients (and their family members) with questions, concerns, they forgot something they were told at their doctor appointment that day, the list goes on and on."

SJC offers healthcare services across the entire continuum, including local and regional primary care, specialized inpatient and outpatient services at two anchor hospitals, home healthcare services, and a wide variety of community outreach and education efforts throughout the region. SJC's faith-based, holistic approach to healing encourages individuals to become more knowledgeable about their personal health while providing the most advanced, comprehensive treatments and state-of-the-art medical technologies available.
